write a program using shell programming to implement an address book.

Program: Address Book using Shell Programming

```
#!/bin/bash
file="addressbook.txt"
touch $file
while true
do
    echo "----- ADDRESS BOOK MENU -----"
    echo "1. Add Record"
    echo "2. View Records"
    echo "3. Search Record"
    echo "4. Delete Record"
    echo "5. Exit"
    echo "Enter your choice:"
    read ch

    case $ch in
        1)
            echo "Enter Name:"
            read name
            echo "Enter Phone Number:"
```

```
    read phone
    echo "Enter City:"
    read city
    echo "$name | $phone | $city" >> $file
    echo "Record Added Successfully."
    ;;

2)
    echo "Address Book Records:"
    cat $file
    ;;

3)
    echo "Enter name to search:"
    read sname
    grep -i "$sname" $file
    ;;

4)
    echo "Enter name to delete:"
    read dname
    grep -iv "$dname" $file > temp.txt
    mv temp.txt $file
    echo "Record Deleted Successfully."
    ;;

5)
```

```
        echo "Exiting..."
        break
        ;;

      *)
        echo "Invalid Choice"
        ;;
    esac
done
```

Explanation

This shell script implements a simple address book management system.
It stores records in a file named addressbook.txt.

Functions included:

- **Add Record** – adds name, phone number, and city
- **View Records** – displays all saved records
- **Search Record** – searches a record by name
- **Delete Record** – deletes a record by name
- **Exit** – closes the program

Output

The program shows a menu repeatedly and performs the selected operation on the address book file.

Conclusion

This shell program is used to create a simple address book using file handling commands. It helps in storing, viewing, searching, and deleting contact records efficiently.
