Shell Programme

Program using Shell Programming to implement an Address Book

a) Create Address Book

```
#!/bin/bash

echo "Enter the name of address book file:"
read book

if [ -f $book ]
then
   echo "Address Book already exists."
else
   touch $book
   echo "Address Book created successfully."
Fi
```

Explanation

This shell program is used to **create an address book file**.

- It asks the user to enter the file name.
- It checks whether the file already exists or not.
- If the file exists, it displays **Address Book already exists**.
- Otherwise, it creates a new file using the touch command.

Sample Output

```
Enter the name of address book file:
mybook.txt
Address Book created successfully.
```

Conclusion

Thus, the shell program for creating an address book was implemented successfully.
